Lista Simplemente Ligada Lineal Sin Encabezado (LSLLSE)

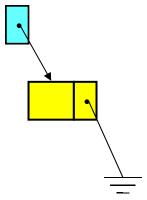

Sin encabezado

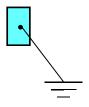

```
typedef _____ tipo_dato;
typedef struct tipo_nodo {
         tipo_dato elem;
          struct tipo_nodo *sig;
          } tipo_nodo;
typedef tipo_nodo *tipo_lista;
typedef tipo_nodo *tipo_pos;
int main() {
         tipo_lista r;
         inicializa (&r);
```

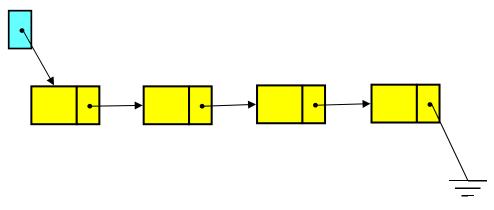

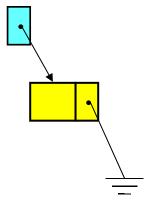

función: inicializa

recibe: *lista* regresa: nada

lista = NULO

función: **vacía** recibe: *lista*

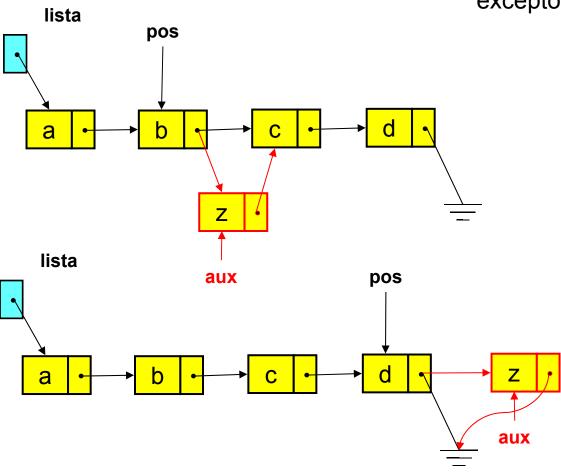

regresa: booleano

¿lista = NULO?

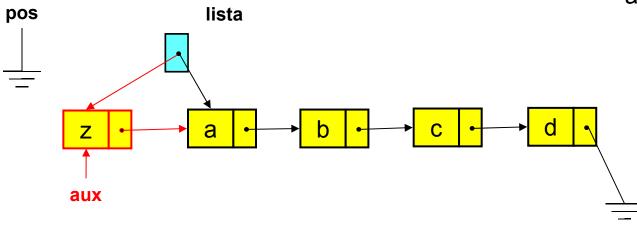

Sí: regresar: verdadero

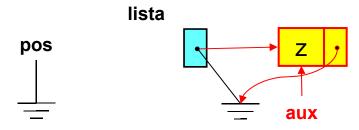

No: regresar: falso

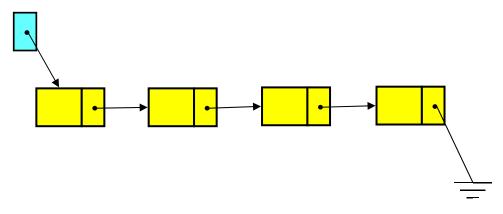

Inserción en cualquier posición, excepto al principio

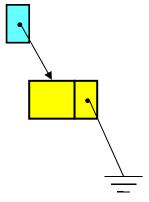

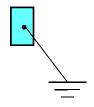

Inserción al principio

función: inserta

recibe: elem, pos, lista

regresa: nada

aux = nuevo nodo

 $aux \rightarrow elem = elem$

$$ipos = NULO?$$

Sí: $aux \rightarrow sig = lista$

lista = aux

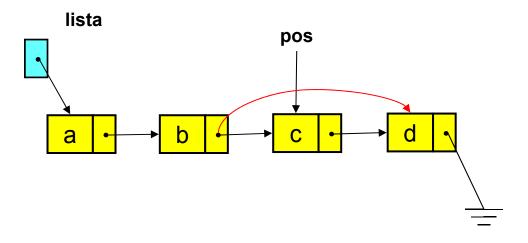

No:
$$aux \rightarrow sig = pos \rightarrow sig$$

 $pos \rightarrow sig = aux$

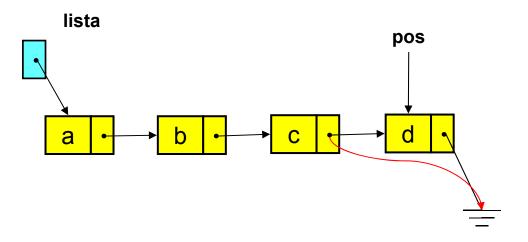

```
void inicializa (tipo Lista *L) {
    *L = NULL;
int vacia (tipo Lista *L) {
    if (*L == NULL)
         return TRUE;
    else
         return FALSE;
int vacia (tipo Lista *L) {
    return *L == NULL;
int vacia (tipo Lista *L) {
    return !*L;
```

```
void inserta (tipo Dato e, tipo Pos pos, tipo Lista *L) {
    tipo Pos aux;
    aux = (tipo Pos)malloc (sizeof (tipo Nodo));
    if (aux == NULL) {
         printf ("memoria insuficiente");
         return;
    aux->elem = e;
    if (pos == NULL) {
         aux->sig = *L;
         *L = aux;
    else {
         aux->sig = pos->sig;
         pos->sig = aux;
```

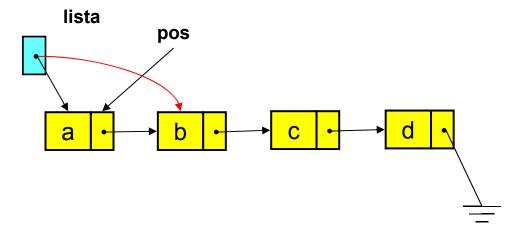

Eliminación en cualquier posición, excepto al principio

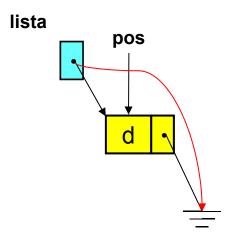

Eliminación en cualquier posición, excepto al principio

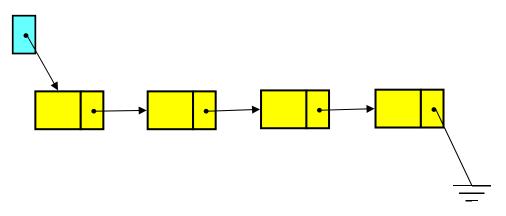

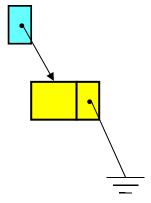

Eliminación al principio

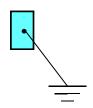

Eliminación al principio

función: elimina

recibe: pos, lista

regresa: nada

 $\c vac\'a(lista)$ ó pos = NULO?

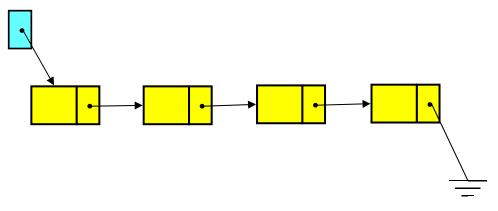

Sí: terminar

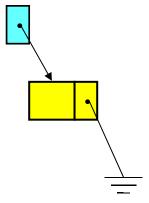

ipos = lista?

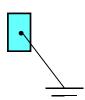

Sí: $lista = lista \rightarrow sig$

No: $anterior(pos, lista) \rightarrow sig = pos \rightarrow sig$

liberar espacio de memoria de pos

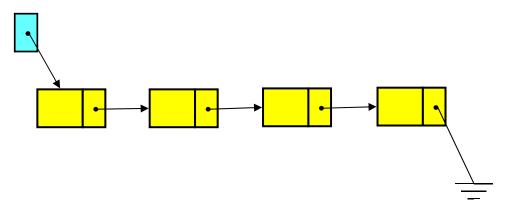

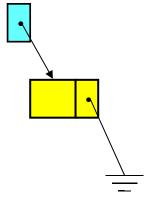

función: *primero*

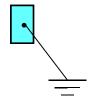

recibe: lista
