Pila Implementada mediante una Lista Simplemente Ligada Lineal Sin Encabezado

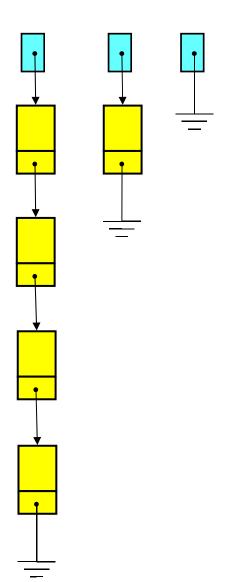

función: inicializa

recibe: pila

regresa: nada

pila = NULO

función: vacía

recibe: pila

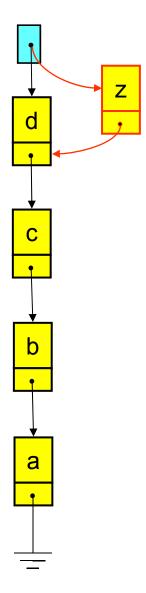

regresa: booleano

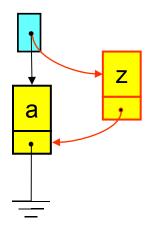

¿pila = NULO?

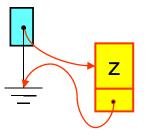

Sí: regresar: verdadero

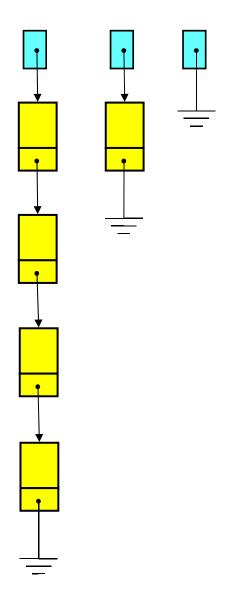

No: regresar: falso

Push

función: push

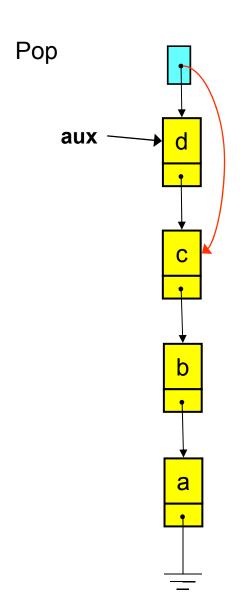

recibe: elem, pila

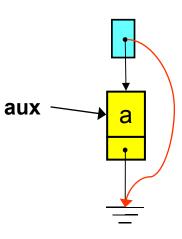

regresa: nada

aux = nuevo nodo $aux \rightarrow elem = elem$

 $aux \rightarrow sig = pila$

pila = aux

función: **pop** recibe: *pila* regresa: nada

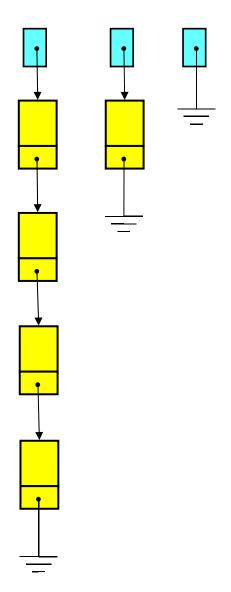

¿vacía(pila)?

Sí: terminar

aux = pila

 $pila = pila \rightarrow sig$

liberar espacio de memoria de aux

función: top

recibe: pila

regresa: elemento

¿vacía(pila)?

Sí: ¡Error de excepción! Insuficiencia de datos Terminar

No:regresar: *pila*→elem
