Lista Doblemente Ligada Circular Con Encabezado Dummy (LDLCCED)

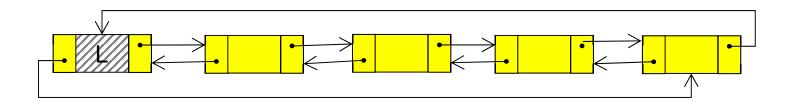

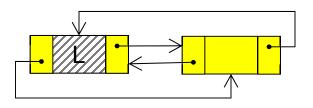

```
typedef _____ tipo_dato;

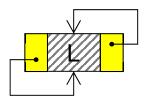

typedef struct tipo_nodo {
    tipo_dato elem;
    struct tipo_nodo *ant;
    struct tipo_nodo *sig;
    } tipo_nodo;

typedef tipo_nodo tipo_lista;

typedef tipo_nodo *tipo_pos;
```

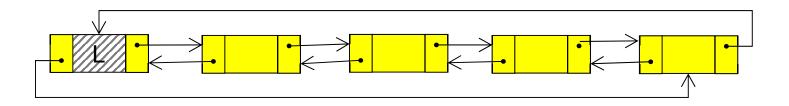

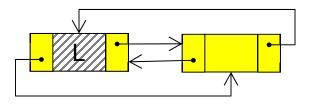

función: inicializa

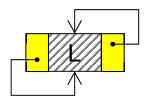

recibe: *lista* regresa: nada

lista.ant = lista

lista.sig =lista

función: **vacía** recibe: *lista*

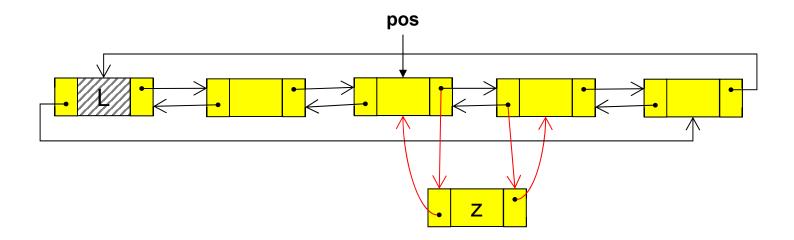

regresa: booleano

ilista.sig = lista?

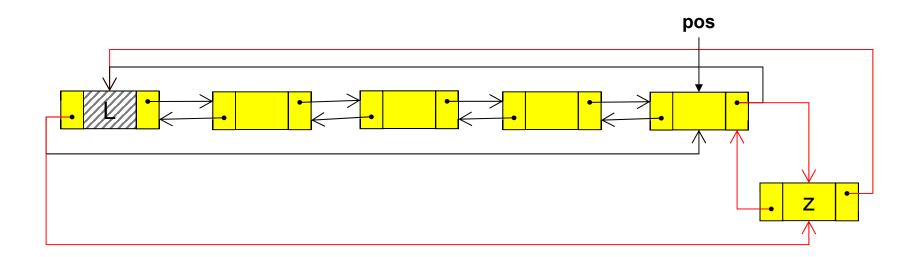

Sí: regresar: *verdadero*

No: regresar: falso

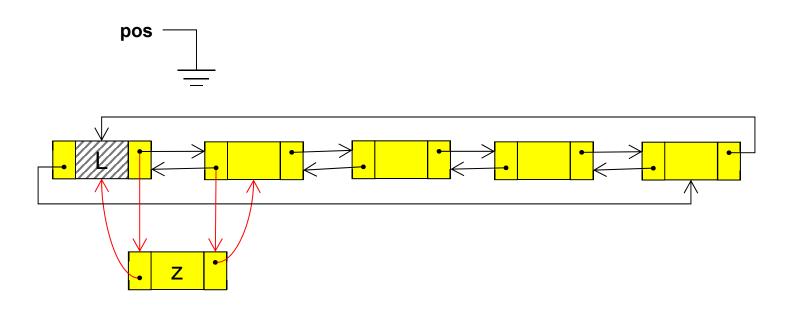

Inserción en cualquier posición

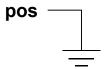

Inserción en cualquier posición

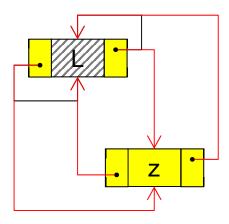

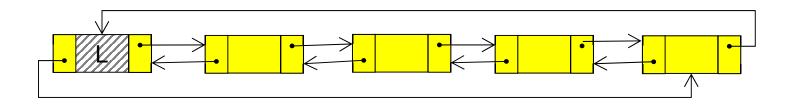

Inserción en cualquier posición

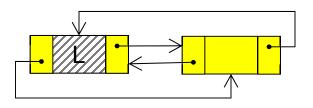

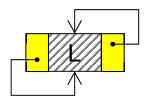

Inserción en cualquier posición

función: inserta

recibe: elem, pos, lista

regresa: nada

$$aux = nuevo nodo$$

 $aux \rightarrow elem = elem$

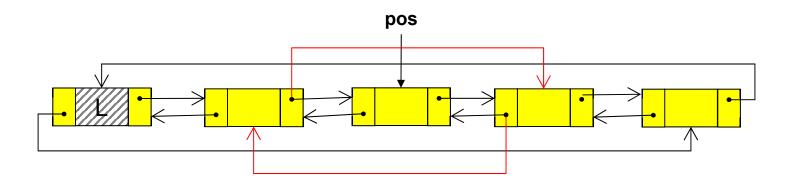

$$pos = NULO?$$

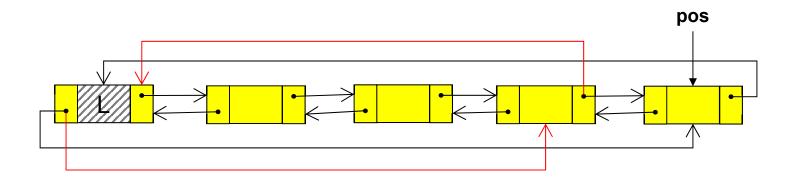

$$aux \rightarrow ant = pos$$

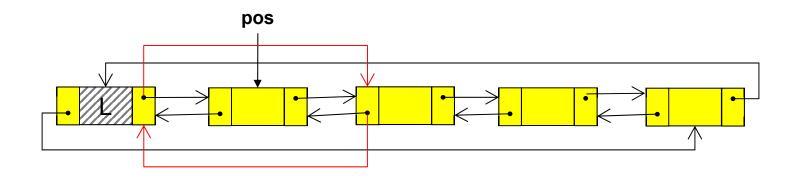

$$aux \rightarrow sig = pos \rightarrow sig$$

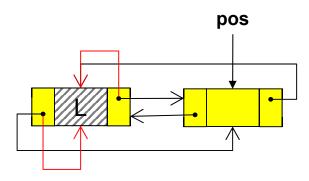

$$pos \rightarrow sig \rightarrow ant = aux$$

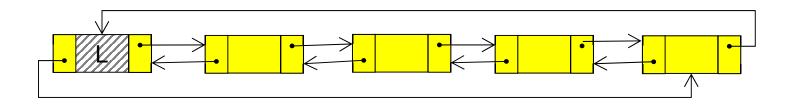

$$pos \rightarrow sig = aux$$

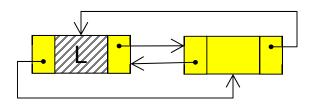

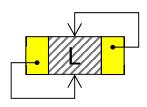

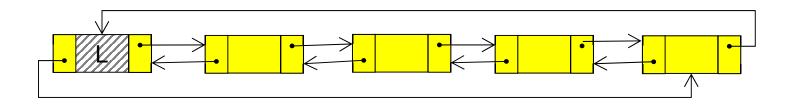

función: **elimina** recibe: *pos*, *lista* regresa: nada

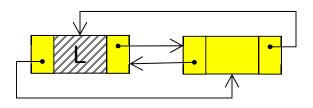

¿**vacía**(*lista*) ó *pos* = NULO? Sí: terminar

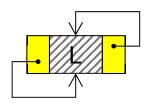

$$pos \rightarrow ant \rightarrow sig = pos \rightarrow sig$$

 $pos \rightarrow sig \rightarrow ant = pos \rightarrow ant$

liberar espacio de memoria de pos

función: primero

recibe: lista

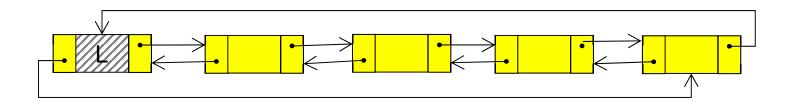

regresa: posición

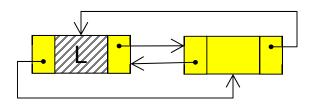

¿vacía(lista)?

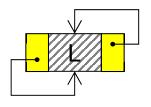

Sí: regresar: NULO

terminar

regresar: lista.sig

función: último

recibe: lista

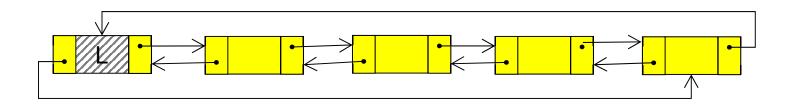

regresa: posición

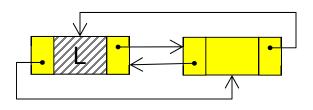

¿vacía(lista)?

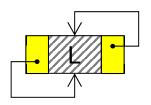

Sí: regresar: NULO

terminar

regresar: *lista*→ant

función. anterior

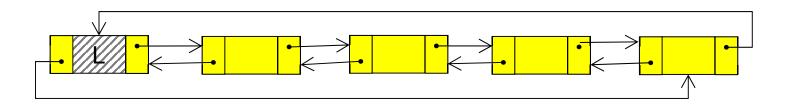

recibe: *pos*, *lista* regresa: posición

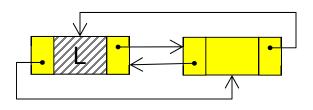

¿vacía(lista) ó pos = NULO? Sí: regresar: NULO terminar

 $ipos \rightarrow ant = lista?$

Sí: regresar: lista.ant

No: regresar: *pos*→ant

función. anterior

recibe: *pos*, *lista* regresa: posición

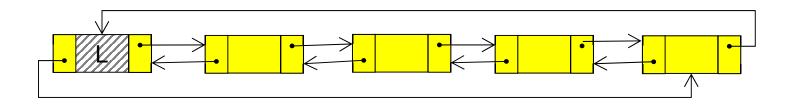

¿vacía(lista) ó pos = NULO? Sí: regresar: NULO

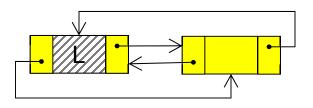

terminar

 $ipos \rightarrow sig = lista?$

Sí: regresar: lista.sig

No: regresar: *pos*→sig

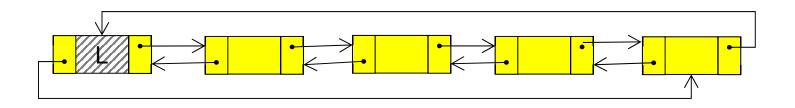

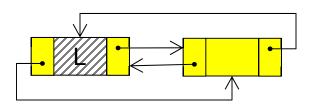

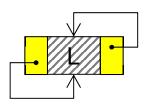

función: **localiza** recibe: *elem*, *lista* regresa: posición

aux = lista.sigmientras aux $\neq lista$ \vdots aux \rightarrow elem = elem? Sí: regresar: aux salir aux = aux \rightarrow sig

regresar: NULO

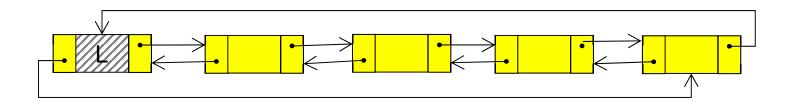

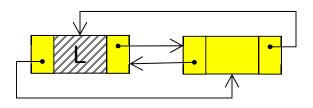

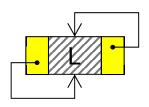

función: **recupera** recibe *pos*, *lista* regresa: elemento

¿vacía(lista) ó pos = NULO?
Sí: ¡error de excepción!
Insuficiencia de datos
terminar

No: regresar: *pos*→elem

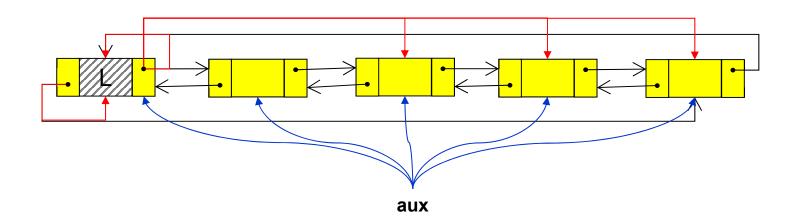

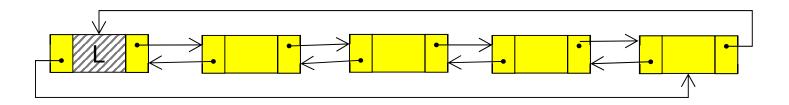

función: imprime

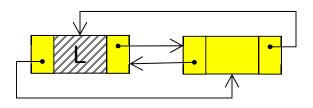

recibe: *lista* regresa: nada

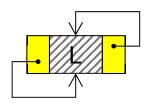

aux = lista.sig $mientras \ aux \neq lista$

imprimir $aux \rightarrow elem$ $aux = aux \rightarrow sig$

función: **anula** recibe: *lista*

regresa: nada

 $mietras\ lista.sig \neq lista$

aux = lista.sig

 $lista.sig = aux \rightarrow sig$

liberar espacio de memoria de aux

lista.ant = lista
